- 4 Outlook

Voids in the cosmic web

Zobov: Neyrinck (2008)

Sutter, Lavaux, Wandelt, Weinberg (2012)

SDSS voids

$R = 5-15 h^{-1} \text{ Mpc}$
 $R = 15-25 h^{-1} \text{ Mpc}$

$R = 25-45 h^{-1} \text{ Mpc}$

Sutter et al. (2012)

Void profile

Estimate density profile by “stacking” tracer particles around void centers

$$\rho_v(r) = \frac{3}{4\pi} \sum_i \frac{m_i(\mathbf{r}_i)}{(r + \delta r)^3 - (r - \delta r)^3}$$

Void profile

Estimate density profile by “stacking” tracer particles around void centers

$$\rho_v(r) = \frac{3}{4\pi} \sum_i \frac{m_i(\mathbf{r}_i)}{(r + \delta r)^3 - (r - \delta r)^3}$$

Estimator for velocity profile

$$v_v(r) = \frac{1}{N(r)} \sum_i \mathbf{v}_i(\mathbf{r}_i) \cdot \frac{\mathbf{r}_i}{r_i} V_c(\mathbf{r}_i)$$

Void profile

Estimate density profile by “stacking” tracer particles around void centers

$$\rho_v(r) = \frac{3}{4\pi} \sum_i \frac{m_i(\mathbf{r}_i)}{(r + \delta r)^3 - (r - \delta r)^3}$$

Estimator for velocity profile

$$v_v(r) = \frac{1}{N(r)} \sum_i \mathbf{v}_i(\mathbf{r}_i) \cdot \frac{\mathbf{r}_i}{r_i} V_c(\mathbf{r}_i)$$

With linear theory

$$v_v(r) = -\frac{1}{3} \Omega_m^\gamma H r \Delta(r) \qquad \Delta(r) = \frac{3}{r^3} \int_0^r \left(\frac{\rho_v(q)}{\bar{\rho}} - 1 \right) q^2 dq$$

Void profile

Estimate density profile by “stacking” tracer particles around void centers

$$\rho_v(r) = \frac{3}{4\pi} \sum_i \frac{m_i(\mathbf{r}_i)}{(r + \delta r)^3 - (r - \delta r)^3}$$

Estimator for velocity profile

$$v_v(r) = \frac{1}{N(r)} \sum_i \mathbf{v}_i(\mathbf{r}_i) \cdot \frac{\mathbf{r}_i}{r_i} V_c(\mathbf{r}_i)$$

With linear theory

$$v_v(r) = -\frac{1}{3} \Omega_m^\gamma H r \Delta(r) \qquad \Delta(r) = \frac{3}{r^3} \int_0^r \left(\frac{\rho_v(q)}{\bar{\rho}} - 1 \right) q^2 dq$$

Empirical best-fit model (4 parameters)

$$\frac{\rho_v(r)}{\bar{\rho}} - 1 = \delta_c \frac{1 - (r/r_s)^\alpha}{1 + (r/r_v)^\beta}$$

Voids in redshift space

Peculiar motions of galaxies cause **redshift-space distortions**:

$$\mathbf{r}_s = \mathbf{r} + \mathbf{v}_{\parallel} H^{-1}(z)$$

- ➡ \perp to line of sight:
Pancakes of God from linear growth
- ➡ \parallel to line of sight:
Fingers of God from nonlinear collapse
- ➡ Galaxy power spectrum no longer isotropic, what about void power spectrum?

Melott et al. (1998)

Voids in redshift space: 2D correlation function

Voids in redshift space: 2D correlation function

Voids in redshift space: 2D correlation function

Voids in redshift space: 2D power spectrum

Voids in redshift space: 2D power spectrum

Voids in redshift space: 2D power spectrum

Voids in redshift space: Alcock-Paczynski test

Perform *Alcock-Paczynski test* to constrain cosmological parameters:

- Angular separation $\delta r_{\perp} = D_A(z) \delta\Theta$
- Radial separation $\delta r_{\parallel} = cH^{-1}(z) \delta z$

Angular diameter distance & Hubble rate

$$D_A(z) = c \int_0^z H^{-1}(z') dz' \quad , \quad H(z) = H_0 \sqrt{\Omega_m(1+z)^3 + \Omega_\Lambda}$$

Voids in redshift space: Alcock-Paczynski test

Perform *Alcock-Paczynski test* to constrain cosmological parameters:

- Angular separation $\delta r_{\perp} = D_A(z) \delta \Theta$
- Radial separation $\delta r_{\parallel} = cH^{-1}(z) \delta z$

Angular diameter distance & Hubble rate

$$D_A(z) = c \int_0^z H^{-1}(z') dz' \quad , \quad H(z) = H_0 \sqrt{\Omega_m(1+z)^3 + \Omega_\Lambda}$$

Any deviation from the fiducial cosmology causes geometric distortions. \Rightarrow Measure **ellipticity** of power spectrum:

$$\epsilon(k_i) \equiv \int_{\Delta k_i} k_{\parallel}^2 P(\mathbf{k}) d^3 k \quad / \quad \int_{\Delta k_i} k_{\perp}^2 P(\mathbf{k}) d^3 k$$

Voids in redshift space: Alcock-Paczynski test

Perform *Alcock-Paczynski test* to constrain cosmological parameters:

- Angular separation $\delta r_{\perp} = D_A(z) \delta \Theta$
- Radial separation $\delta r_{\parallel} = cH^{-1}(z) \delta z$

Angular diameter distance & Hubble rate

$$D_A(z) = c \int_0^z H^{-1}(z') dz' \quad , \quad H(z) = H_0 \sqrt{\Omega_m(1+z)^3 + \Omega_\Lambda}$$

Any deviation from the fiducial cosmology causes geometric distortions. \Rightarrow Measure **ellipticity** of power spectrum:

$$\epsilon(k_i) \equiv \int_{\Delta k_i} k_{\parallel}^2 P(\mathbf{k}) d^3 k \quad / \quad \int_{\Delta k_i} k_{\perp}^2 P(\mathbf{k}) d^3 k$$

Problem: degeneracy with redshift-space distortions

Voids in redshift space: Alcock-Paczynski test

Outlook

- Universal void density- and velocity profiles emerge from self-similarity / fractal nature of large-scale structure?
- Void auto-correlations provide pristine Alcock-Paczynski test?

Outlook
